Re: Remote Control Pairing Instructions

Note: Although each remote is paired with its corresponding Alligator at the factory, sometimes it may be necessary to “re-pair” the remote. The instructions below will assist you.

Pairing Instructions

- 1) Turn on the Alligator and the remote.
- 2) Next, press and hold the “Pair” button on the control handle of the Alligator (about 20 seconds) until you see the GREEN LED begin to flash (release button).
- 3) Next, press and release the “Stop” button on the remote about 6 times (rapidly) or until the flashing GREEN LED light on the Alligator goes off. Your pairing is now complete. Repeat when necessary.

Re: Straight Line Control

Note: Although the front wheel of every Alligator is calibrated at the factory for straight line control, some very slight veering may occur on particularly sloped fairways or when your clubs are unevenly distributed in your golf bag. Corrections are easily made with a quick tap of the left or right arrow on the remote. It’s also helpful to adjust your club placement in your bag for a more even weight distribution. Our Technical Services Department is also available to assist you if your calibration ever needs adjusting.
